# 1 Preamble

## 1.1 Abstract

### 1.1.1 What is SIF?

SIF is not a product, but a technical blueprint for enabling diverse applications to interact and share data related to entities in the pK-12 instructional and administrative environment. SIF is designed to:

-  Facilitate data sharing and reporting between applications without incurring expensive customer development costs;
-  Enhance product functionality efficiently; and
-  Provide best-of-breed solutions to customers easily and seamlessly.

The SIF Implementation Specification defines common data formats and rules of interaction and architecture, and is made up of two parts:

-  1. The *SIF Infrastructure* Implementation Specification which defines the rules of interaction and messages framework, and;
-  2. The *SIF Data Model* Implementation Specification which is an XML-based data model that models entities in the learning environment as SIF Data Objects to be shared between applications; This document only describes the SIF Data Model for Australia.

*SIF 3 Infrastructure* defines;

-  a secure REST-based transport protocol for defining both direct and brokered connections between software applications (which can act as REST servers or clients)
-  a set of services to enable interactions between REST servers and clients, including creating environments, other administrative task, synchronous exchanges of data, and asynchronous message queues
-  an abstract, platform-independent definition of the API between one software application and another or a broker.
-  A *SIF Environment* is a distributed system that consists of one or more software applications with a SIF Adapter (a SIF-enabled application) sharing/reporting one or more SIF data objects over a network; it may also involve middleware (a message broker). A *SIF Implementation* consists of one or more SIF Environments deployed and configured to meet customer data sharing and reporting needs.
-  The SIF Implementation Specification defines architecture requirements and communication protocols for software components and the interfaces between them; it makes no assumption of specific hardware or software products needed to develop SIF-enabled applications and/or middleware implementations, other than their ability to support technologies leveraged as the foundation for SIF, most prominently XML and HTTP(S) and including JSON and REST.

#### 1.1.1.1 What is SIF (AU)?

SIF Implementation Specification (Australia) defines a set of data objects supporting Australia's interoperability requirements for the education sector and combines this data model with established infrastructure protocols from the SIF Implementation Specification [SIF]. SIF Implementation Specification (Australia) 3 leverages the SIF architecture and refers to SIF Infrastructure Specifications greater than 3.0.1 [SIF 3.x] to support its data objects, with an Australia-specific namespace and the data objects defined in this specification. Technical readers should note that the version number internal to SIF XML messages identifies the version number of the SIF Data Model.

### 1.1.2 SIF Association

The Schools Interoperability Framework Association (SIF Association); known in Australia as; The Systems Interoperability Framework Association, is an industry initiative to enable interoperability and data sharing between software applications in the pK-12 instructional and administrative environment, and the forum for companies and educators to participate in the development of SIF specifications in the SIF Association's working groups and task forces. The SIF Association is designed to:

-  Join industry leaders in creating the next-generation framework for education technology; and
-  Leverage co-marketing opportunities with partners and distributors.

## 1.2 Disclaimer

The information, software, products, and services included in the SIF Implementation Specification may include inaccuracies or typographical errors. Changes are periodically added to the information herein. The SIF Association may make improvements and/or changes in this document at any time without notification. Information contained in this document should not be relied upon for personal, medical, legal, or financial decisions. Appropriate professionals should be consulted for advice tailored to specific situations.

THE SIF ASSOCIATION, ITS PARTICIPANT(S), AND THIRD PARTY CONTENT PROVIDERS MAKE NO REPRESENTATIONS ABOUT THE SUITABILITY, RELIABILITY, TIMELINESS, AND ACCURACY OF THE INFORMATION, SOFTWARE, PRODUCTS, SERVICES, AND RELATED GRAPHICS CONTAINED IN THIS DOCUMENT FOR ANY PURPOSE. ALL SUCH INFORMATION, SOFTWARE, PRODUCTS, SERVICES, AND RELATED GRAPHICS ARE PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND. THE SIF ASSOCIATION AND/OR ITS PARTICIPANT(S) HEREBY DISCLAIM ALL WARRANTIES AND CONDITIONS WITH REGARD TO THIS INFORMATION, SOFTWARE, PRODUCTS, SERVICES, AND RELATED GRAPHICS, INCLUDING ALL IMPLIED WARRANTIES AND CONDITIONS OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, AND NON-INFRINGEMENT.

IN NO EVENT SHALL THE SIF ASSOCIATION, ITS PARTICIPANT(S), OR THIRD PARTY CONTENT PROVIDERS BE LIABLE FOR ANY DIRECT, INDIRECT, PUNITIVE, INCIDENTAL, SPECIAL, CONSEQUENTIAL DAMAGES, OR ANY DAMAGES WHATSOEVER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF USE, DATA, OR PROFITS, ARISING OUT OF OR IN ANY WAY CONNECTED WITH THE USE OR PERFORMANCE OF THIS DOCUMENT, WITH THE DELAY OR INABILITY TO USE THE DOCUMENT, THE PROVISION OF OR FAILURE TO PROVIDE SERVICES, OR FOR ANY INFORMATION, SOFTWARE, PRODUCTS, SERVICES AND RELATED GRAPHICS OBTAINED THROUGH THIS DOCUMENT OR OTHERWISE ARISING OUT OF THE USE OF THIS DOCUMENT, WHETHER BASED ON CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE, EVEN IF THE SIF ASSOCIATION, ITS PARTICIPANT(S), OR THIRD PARTY CONTENT PROVIDERS HAVE BEEN ADVISED OF THE POSSIBILITY OF DAMAGES. BECAUSE SOME STATES/JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF LIABILITY FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES, THE ABOVE LIMITATION MAY NOT APPLY TO YOU. IF YOU ARE DISSATISFIED WITH ANY PORTION OF THIS DOCUMENT OR WITH ANY OF THESE TERMS OF USE, YOUR SOLE AND EXCLUSIVE REMEDY IS TO DISCONTINUE USING THIS DOCUMENT.

This specification is released with the following provisos to developers and educators.

## 1.3 Certification and Compliance Claims

Though a product may be demonstrated to comply with this specification, no product may be designated as *SIF Certified*™ by an organization or individual until the product has been tested against and passed established compliance criteria, published separately [SIFCertification]. Organizations and individuals that are currently paying annual membership dues to the SIF Association and dedicating resources to the initiative may also use the designation *SIF Participant* to describe their involvement with the SIF Association and SIF in marketing, public relations and other materials.

### 1.4.1 Overview

On July 18th, 2017 the Access 4 Learning Community (henceforth "A4L") Association Board of Directors elected to ensure that the contents, associated artifacts and schemas representing the SIF specification should be open and available to all and protected under global standard licensing agreements.

All human-readable artifacts published and created by the Access 4 Learning Community are protected under a Creative Commons license.

All machine-readable artifacts and content is protected under an Apache 2 license.

All published artifacts and Specifications published after July 18, 2017 are covered.

### 1.4.2 Human-readable artifacts

The SIF Implementation Specifications and all human-readable related artifacts and materials are available under an [Attribution-ShareAlike CC BY-SA 4.0](#) International license. Entities must give appropriate credit, provide a link to the license, and indicate if changes were made. Modifications of this license and derivatives need to be licensed under the same terms, but not other works in the compilation or collection. You may do so in any reasonable manner, but not in any way that suggests the licensor endorses you or your use. If you remix, transform, or build upon the material, you must distribute your contributions under the same license as the original. Entities may not apply legal terms or technological measures that legally restrict others from doing anything the license permits.

*This license enables reusers to distribute, remix, adapt, and build upon the material in any medium or format, so long as attribution is given to the creator. The license allows for commercial use. If you remix, adapt, or build upon the material, you must license the modified material under identical terms.*

### 1.4.3 Machine-readable artifacts

The machine-readable files associated with the Specification, including Excel presentations, XSD schemas, JSON schemas, and OpenAPI specifications, are all licensed under the [Apache 2.0](#) license. Developers can look here for guidance on using the license: [Using the Apache license](#). The Apache 2.0 License is permissive. It allows you to use, modify, and distribute the licensed software, including creating derivative works, without requiring those derivative works to be licensed under the same terms. You can release the modified parts of the code under any license you prefer.

2 Introduction

2.1 Specification Organization

With respect to the SIF Specification, educators and non-technical readers are typically interested in the pK-12 data objects that can be shared and reported on by SIF-enabled applications in SIF implementations. This document, the *SIF Data Model Implementation Specification*, contains a [Data Model](#) section in a format that should not be a barrier to readers with some knowledge of [XML](#). More technical readers, including software architects, developers and integrators, will also be interested in the separate *SIF Infrastructure Implementation Specification* document.

-  The [Preamble](#) provides an abstract of SIF along with the SIF Association disclaimer and details regarding certification and compliance claims.
-  This Introduction outlines the organization of this specification document, provides conventions used in this document, and summarizes versioning of the specification. Highlights of additions/changes since the previous version of the specification are also provided.
-  The [Data Model](#) section provides definitions of the XML structure for common elements in the data model and all objects related to entities in the pK-12 environment. This section is organized by the working groups and task forces within the SIF Association that have defined common elements or objects.
-  The document concludes with various appendices including lists of code set values defined within SIF and in external documents, and ends with a list of [references](#) to other documents.

2.2 Document Conventions

2.2.1 Definitions

The first time a term or concept is defined, it may be *emphasized*.

2.2.2 Structure and Values

SIF message and object names, XML element tags, attribute names and values, and other codes or values are typically presented as in this sentence.

2.2.3 Examples

JSON

XML

Longer examples of XML,JSON or HTTP messages are typically numbered and presented as given here.

Example 2.2.3-1. Examples Convention

2.2.4 JSON

Java Script Object Notation (*JSON*) is an alternate way to represent an object in a tree like structure. *JSON* is desirable for a variety of reasons including: good wire efficiency, strong programming support, and satisfactory human readability. Since SIF's data models are formally defined using XML Schemas, *JSON* conversion is handled through one of two sets of rules.

Default: *Goessner Notation*, which uses schema-independent generic rules for ease of translation. [\[Goessner JSON\]](#)

Preferred: *PESC JSON* which uses schema-aware rules for consistent results. [\[PESC JSON\]](#)

2.2.5 References

References to other works occurring in this text are given in brackets, e.g. [\[REFERENCE\]](#). The text in brackets corresponds to a key in the [References](#) appendix. Often when the text in the brackets duplicates surrounding text, the reference alone is used (e.g. [\[XML\]](#) instead of XML [\[XML\]](#)).

2.2.6 Terminology

The key words MUST, MUST NOT, REQUIRED, SHALL, SHALL NOT, SHOULD, SHOULD NOT, RECOMMENDED, MAY, OPTIONAL, when EMPHASIZED, are to be interpreted as described in [\[RFC 2119\]](#).

2.2.7 XML Diagrams

Quick overviews of XML structures, including messages, objects, common elements and types, are provided in XML diagrams. The following diagram illustrates the conventions typically encountered in SIF.

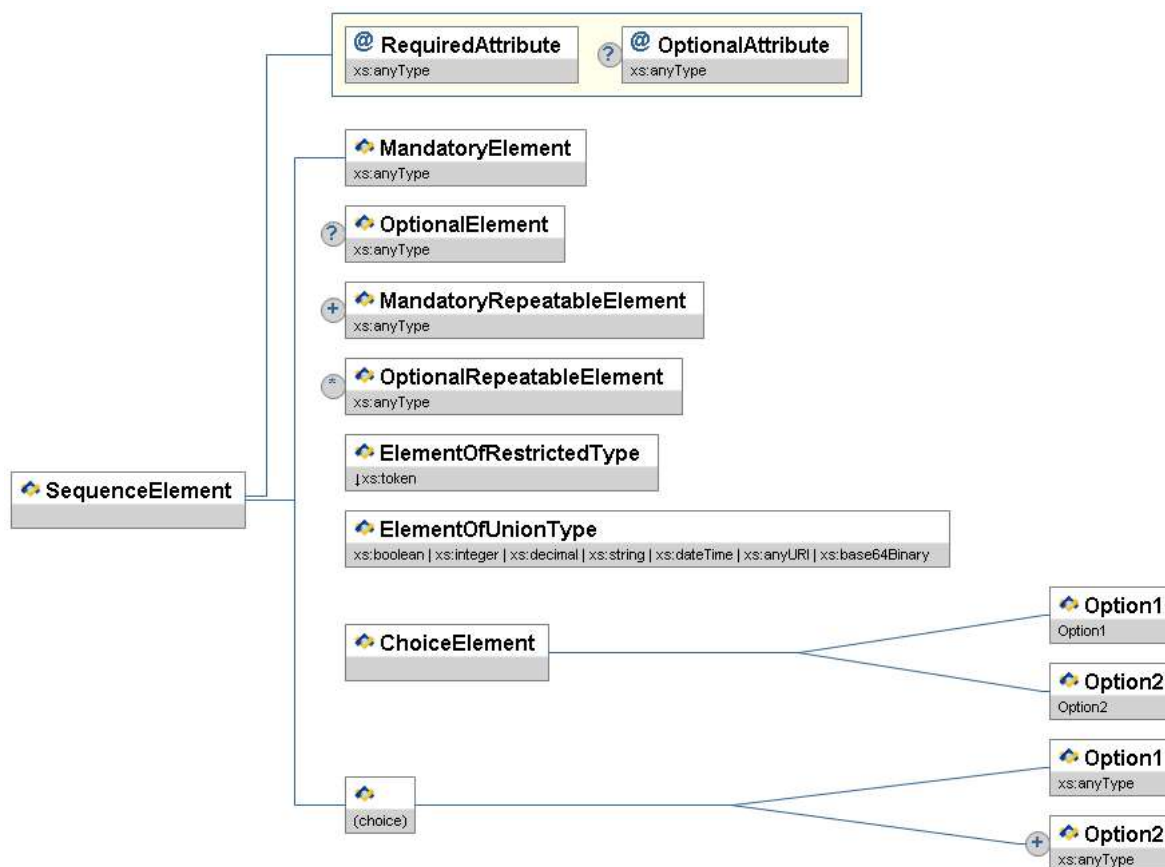

Figure 2.2.7-1: XML Diagram Conventions

XML elements are represented by rectangles with the name of the element in the upper portion and the type, if any, in the lower portion. Attributes are represented in the same fashion, but have an @ icon rather than a SIF icon. Elements and attributes that are optional have a circled ? (0 or 1 occurrence) to the left of the rectangle. Optional and mandatory repeatable elements are indicated by a circled \* (0 or more occurrences) and + (1 or more occurrences), respectively. Element attributes are grouped together in a rectangular block and connected to the element with a line that turns at right angles. Ordered sequences of XML elements are bracketed by lines that turn at right angles. When a choice of XML elements is indicated, the elements are bracketed by angled lines. A choice of elements can occur within an element, or may be an unnamed choice of elements.

XML types are represented using the same conventions as for XML elements, though the type portion of the rectangle typically indicates a base type, if any.

The type name of any element, attribute or type may be prefixed with a |, indicating the type is restricted in some fashion by one or more XML Schema facets (e.g. enumeration). When the type is a union of types, a list of types is presented, each type separated by |; if the list of union types is long, the list may be marked with ellipses, e.g., | ...

In an actual XML diagram, element, type and attribute rectangles are usually linked to their corresponding definitions/descriptions in accompanying tables.

## 2.3 Version Numbers

The SIF Implementation Specification uses the following version numbering scheme:

*major version.minor version.revision number(x.y.z)*

Once a versioned specification (Specification Release) has been released, the contents of that version MUST NOT be modified. Any modifications MUST be released under a new Specification Version Number unless the modification is the correction of an error or update of documentation. Each Specification Release has an associated errata section in which modifications and corrections of the release are listed.

A Specification Version Number for a Specification Release uses conventions as follows:

- A Specification Version Number MAY take the form x.y.z where x, y, and z are nonnegative integers (whole numbers), and MUST NOT contain leading zeroes. x represents the *Major version*, y represents the *Minor version*, and z represents the *Revision version*.
- Each version number element MUST increase sequentially based on the guidelines defined within this document; for instance, 1.9.1 to 1.10 to 1.11 to 1.11.1.
- Precedence refers to how versions are compared to each other when ordered. Precedence MUST be calculated by separating the version into major, minor, revision identifiers in that order. Precedence is determined by the first difference when comparing each of these identifiers from left to right as follows: Major, Minor, and Revision versions are always compared numerically; for example, 1.0.0 < 2.0.0 < 2.1.0 < 2.1.1.

An instance of a Specification Version Number is the canonical identifier for a Specification Release. The manner in which the Specification Version Number increments after a given Specification Release depends on the type and relative magnitude of changes being proposed in the new release as follows:

1. The Revision version number (z in x.y.z, where x >= 0) MUST be incremented when specification changes are limited to backward compatible changes. If z=0 then the convention is to drop the Revision number: for example, 3.1 instead of 3.1.0. Backward compatible changes include the following:

- New data object.
- New optional data object element.
- New optional utility service object element.

2. The Minor version number (  $y$  in  $x.y.z$ , where  $x > 0$  ) MUST be incremented if new functionality is added to the specification. It MUST be incremented if any aspect of the specification is marked as deprecated. It MUST be incremented if any aspect of the specification is not backward compatible. (Backward compatible means any change that can be implemented by one participant (consumer, Environment or service provider) without requiring changes by other participants to maintaining the same level of interoperability.) It MAY be incremented if substantial new functionality or improvements are introduced. It MAY include changes that are categorized as "Revision" level magnitude. The Revision version MUST be reset to 0 when the Minor version is incremented. Changes requiring a Minor version increment include the following:

-  New mandatory data object element.
-  New mandatory utility service object element.
-  Deprecate data object element.
-  Deprecate data object.
-  Deprecate utility service object element.
-  Deprecate utility service object.
-  Remove deprecated data object element.
-  Remove deprecated data object.
-  Remove deprecated utility service object element.
-  Remove deprecated utility service object.
-  Add support for additional authentication methods.
-  Add support for additional TLS version.
-  Any changes concerning security.
-  Any optional to mandatory change.
-  Add support for additional payload representations.

3. The Major version number (  $x$  in  $x.y.z$ , where  $x > 0$  ) MUST be incremented if a significant change is introduced to the specification. It MAY include changes categorized as Minor and Revision level changes. The Revision and Minor version numbers MUST be reset to 0 when the Major version is incremented. Changes requiring a Major version increment include the following:

-  Deprecate payload representation.
-  Remove deprecated payload representation.
-  Add support for a distinct data model namespace.
-  Replace (deprecate and remove) a locale data model.
-  Any significant change that requires the Major version to be incremented as deemed by the A4L Association Board for global specifications and Management Boards for locale data models.

## 2.4 Highlighted Additions/Changes

3 Data Model

3.1 Introduction

This section presents the XML structure for SIF Data Model common elements and objects in a tabular format for readers less versed in parsing formal XML schema definitions, along with conventions that typically apply in the data model for easy reference.

3.1.1 Format

The Char(acteristics) column for all of the tables in this section use the following codes:

Code	Characteristic
M	Mandatory element or attribute
O	Optional element or attribute
C	Conditional element or attribute
MR	Mandatory and repeatable element
OR	Optional and repeatable element
CR	Conditional and repeatable element

Mandatory elements **MUST** be present in Add events, and in non-empty and non-error responses to requests for entire SIF objects (e.g., no SIF\_Query/SIF\_QueryObject/SIF\_Element elements supplied in the request). Mandatory attributes **MUST** always be present if their corresponding element is present.

SIF Adapters and message brokers **MUST** supply data according to the types specified in the Type columns and their corresponding equivalents in the most recent schema files associated with this specification. If there is a discrepancy between object and element definitions in this specification and the corresponding schema files, the definition in the schema files takes precedence; every effort will be made to note discrepancies in the [errata](#) for this document as they are identified.

3.1.2 Conceptual Modelling

The SIF AU Data Model is a “data in motion” model, which has been designed for data exchange between institutions. However, it is increasingly being used within enterprises, and it has been widely used as a nationally agreed data model for education. In order to help navigate the SIF data model better, and to make it easier to map between SIF and other data models of education, we have abstracted a conceptual data model from SIF AU, treating SIF AU as a logical data model. See section 4 for more detailed information and the model itself.

3.1.3 Conventions

3.1.3.1 Object Attributes/Primary Keys

While XML attributes are primarily used in SIF to provide additional processing information regarding the associated element content, attributes at the root level of an object have special significance. These attributes serve as the primary key or identifier for the object; in all cases this is no more than a RefId GUID of [RefIdType](#)

3.1.3.2 Object References

As stated elsewhere, SIF primarily uses GUIDs as object identifiers, primary keys, or RefIds. References to primary keys (foreign key references) follow certain conventions in SIF in most objects:

-  An element or attribute of type [IdRefType](#) can be defined that consists of the referenced object name concatenated with RefId, e.g., DataPersonalRefId (a reference to the object identifier/primary key/RefId of a DataPersonal object);
-  An element requiring a more descriptive name for the reference or one that refers to more than one object type is defined as [IdRefType](#), has an element name of a group's choosing (or generically SIF\_RefId) and enumerates all possible object types that can be referenced in the SIF\_RefObject attribute; or
-  A pair of attributes can be defined, one of type [IdRefType](#) containing the referenced object's RefId, the other enumerating all possible object types that can be referenced; generically these are named SIF\_RefId and SIF\_RefObject, respectively; naming conventions that programmatically allow identification of the pair beyond the generic names will be documented when the need arises.

3.1.3.3 Lists/Repeatable Elements

To those accustomed with normalized relational databases, the SIF Data Model will appear to not be especially normalized, especially with regard to repeating groups of data not being separated into their own “tables,” or in SIF’s case, “objects” with primary/foreign keys to maintain the relationship. Bear in mind that SIF is not a format for storing data; it is a format for transmitting data *asynchronously* between *disparate* and *distributed* systems needing to share data for interoperability; the format this data takes in different systems can vary greatly, and the data related to any given “entity” may come from a variety of sources and systems. The goals of normalization—eliminating redundancy, organizing data efficiently, reducing inconsistencies, etc.—take on a different meaning in a message queuing system. Of primary importance is transmitting the data needed for interoperability in a minimum number of messages. The need to “join” together a great number of separate objects is kept to a minimum in SIF, as individual systems do not have access to all the data required and due to the asynchronous nature of SIF, any one of these systems may take a fair amount of time before returning data necessary for joins (SIF\_ExtendedQuery has been developed to communicate a join to a single system that may have direct access to the all the data necessary to efficiently accomplish this task). It’s one thing to make a separate request for a student’s picture or enrollment information, another entirely to request every available phone number, address and e-mail address separately from the SIF Environment. As such, it is often the case in SIF that repeating data is stored directly in an object, rather than being separated out into a separate object.

Repeating data is very analogous to objects, though, within any given object. In SIF's Publish/Subscribe model, repeating elements in objects can be added to, changed in or deleted from an object, much like objects can be added to, changed in or deleted from a SIF Environment. Within an existing object, all of these actions take place within a change event, and repeating elements—if any exist initially—are first made available within an object in an *Add* event or can be obtained directly via requests. Repeatable elements are contained within a parent *List* element in most SIF objects whether or not they support events, e.g.:

Example 3.1.3.3-1: EmailList

#### 3.1.3.3.1 List

While a unique, primary key may still be identifiable in its child elements, a *List* is used primarily when:

-  the list is a cohesive whole conceptually, where supporting or referring to a subset of the list is of little value;
-  when the list consists only of keys, and no associated data;
-  the list is informational/temporary state information and not typically persisted; or
-  when no key exists to uniquely identify items in the list.

*Lists* are always transmitted as a cohesive unit consisting of the parent list container element and all child elements. If no child elements exist in the list, the list consists of the container element alone. Omission of an optional *List* in an *Add* event also implies no list items. In a *change* event, omission of the *List* indicates no changes have been made; otherwise the parent container element and all child elements, if any, are included. Systems storing *List* data should replace all corresponding data in their systems when persisting the list; likewise when a change is made to one or more list items or when all items in the list are deleted, systems should send the whole list in a *change* event.

Example 3.1.3.3-1-1: Indicating an updated list of country citizenships

A system that supports *CountriesOfCitizenship* updates its local data to reflect Australia and German citizenship.

### 3.1.4 Validation

#### 3.1.4.1 Supported Optional Elements Without Values

Some agents follow the convention of supplying an optional element as empty (e.g. `<BirthDate></BirthDate>` or `<BirthDate/>` to indicate that the application supports the element, but that it currently has no value available within a given object. To allow for this convention within SIF—as in this example an empty string does not satisfy the `xs:date` type definition of *BirthDate*—all optional elements in SIF are defined as *nillable* [SCHEMA]. To satisfy type constraints on an element while still supplying an empty or "nil" value, agents **MUST** tag the element with a `true` value for the `nill` attribute from namespace `http://www.w3.org/2001/XMLSchema-instance` [SCHEMA] (e.g. `<BirthDate xsi:nill="true"/>` where the prefix `xsi` has been mapped to the namespace `http://www.w3.org/2001/XMLSchema-instance`), unless an empty value is valid with regard to the element's type definition, in which case supplying the `nill` attribute value of `true` is optional.

#### 3.1.4.2 Externally-Defined XML

Note that XML not defined within SIF does not necessarily support ad hoc omission of XML elements at will to conform with the conventions of the SIF Publish/Subscribe Model (where unchanged elements are typically omitted in *Change* events, and where non-key elements are often omitted in *Delete* events) or of the SIF Request/Response Model (where a subset of elements can be retrieved from objects with requests). If externally-defined XML occurs within a SIF data object, SIF conventions do not extend to that XML unless that XML is defined to accommodate SIF conventions; the XML, when transmitted, must only conform to any external definitions dictating its structure, if any. Applications should be prepared for the possibility of receiving whole externally-defined XML structures in *Change* events (regardless of how little or much of the external XML has changed) and possibly also *Delete* events, likewise in responses even when a subset of the XML structure's child elements may have explicitly been requested.

#### 3.1.4.3 Payload Validation

There are two sets of XSDs available for Validation of Payload.

##### 3.1.4.3.1 Create

The first set, "DataModel" is 'strict' and all of the elements that are required for validation are 'Mandatory' in this suite of XSDs. This suite is traditionally used for Creation of new entities, which generally require validation before being saved into a Data Store.

##### 3.1.4.3.2 Update

The second set, "SIF\_Message" is 'lax' and every element within the schema is 'optional' except the 'RefId' the identifying GUID/UUID. (However, required elements are not *nillable*.) This suite of XSDs are traditionally used for Update and Delete of current entities. If an element is not included in the payload of an Update operation, its value is assumed to be unchanged. In addition, if the payload contains the *RefId*/UUID only, the consumer must assume that object to be DELETED or that it has been deleted since the original request was made.

##### 3.1.4.3.2.1 JSON Validation

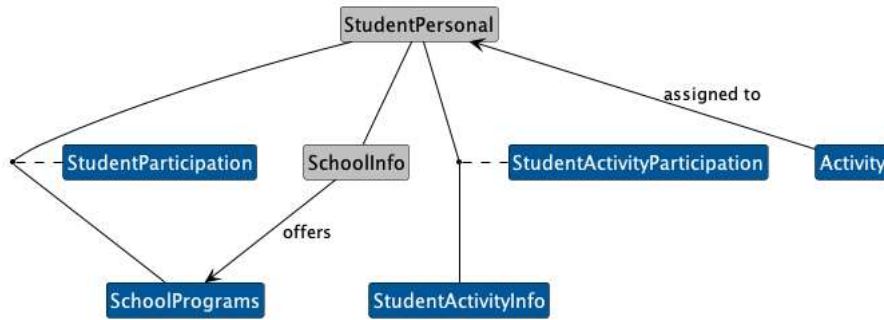

No Validation mechanism/schema is currently defined for SIF JSON, but that SIF JSON is intended to be a one-to-one mapping from SIF XML

##### 3.1.4.3.3 Local Code Set Validation

In SIF AU 3.4.5 we introduce a method of augmenting code sets with local values without 'breaking changes'. Future releases will add "OtherCodeListType" to each code set and in-line enumerations will also be typed to allow for extensions. Every Object in SIF AU 3.4.5 has a LocalCodeType which will allow extensions to, but does not replace, current validation set. The following document outlines the need and the interim solution.

### 3.2.5 StudentParticipation

This object contains information pertaining to student eligibility for and participation in an individualized special program such as special education, ESL, etc.

Multiple instances of this object may be transmitted for a particular student because the student may participate in multiple programs and because the details of a student's participation in a given program may change over time. A separate instance of this object must be generated for each program in which the student participates, and the `ProgramType` element is used to identify the particular program. In addition, each time the student's participation profile changes for a particular program, a new instance of this object must be generated with the appropriate value in the `ProgramType` element, the effective date of the new profile in `StudentParticipationAsOfDate`, and a new `RefId`.

**SIF\_Events** are reported for this object.

### 3.4 Attendance

This represents objects that allow schools to securely provide SIS information to the Attendance product of their choice, and also to allow school attendance records to be published to a jurisdictional data hub, recording attendance at varying degrees of granularity.

#### 3.4.1 CalendarDate

This object defines information related to a school calendar day in a given school calendar year. If both CalendarDate and CalendarSummary objects are supported, there must be an instance of this object for each date between CalendarSummary StartDate and EndDate, inclusive.

**SIF\_Events** are reported for this object.

### 3.4.2 CalendarSummary

This object provides a summary of a school's calendar information for a given school year. A school may have more than one calendar per school year (e.g., one calendar for Kindergarten students, one for special education students, one for seniors, or one for each calendar track), and each may have different days in session, start and end dates, minutes per day, instructional minutes, etc.

**SIF\_Events** are reported for this object.

### 3.4.7 StudentPeriodAttendance

This object allows recording of period level attendance for a student. The Australian StudentPeriodAttendance object differs to the US StudentPeriodAttendance object in the following ways:

Student Period Attendance object is usually linked to a SessionInfo object (see below), but it is possible, for simple period attendance packages, to not link period attendance to a session or timetable.

 There will be one provider of the StudentPeriodAttendance within a SIF Zone in Australia. The US, in contrast, has specified objects and events to allow for multiple providers of the StudentPeriodAttendance object in a zone.

SIF\_Events are reported for this object.

## 3.7 Finance

A set of objects to support the transfer of financial information representing, and not an accounting package. The assumption is that SIF is required only to exchange information about individual transactions (e.g. purchase orders, invoices, receipts, journals), and that reporting will be done out of existing applications—although those reports may be based on the transactional information received through SIF

Many instructional applications in a SIF zone need to share teaching and learning objects. Curriculum planning applications, content repositories, systems, etc.—all of these systems need to share instructional content utilizing the `LearningResource` object.

The `LearningResourcePackage` object provides a transport envelope to move these files across the SIF zone.

Note: With SIF Implementation Specification version 2.4 the choice element depicted in the diagram below has changed. In the XSD files, the choice rendered as a sequence of optional elements. Now, in the XSD files, the choice element is rendered as an `xs:choice`. This may cause problems with agents that treat the

### 3.9 NAPLAN

This diagram depicts the structure and connections between objects representing the NAPLAN Results and Reporting Data Set.

#### 3.9.1 NAPCodeFrame

This object replicates the codeframe information about each NAPLAN test (per year level and domain), as a tree of GUIDs pointing to the relevant testlet and item/stimulus objects, so that the structure of the test can be traversed within one object.

**SIF\_Events** are reported for this object.

The screenshot shows a software interface with two tabs at the top: "JSON" and "XML". The "XML" tab is selected, and the XML content is displayed in a large text area. The XML structure represents a NAPTestItem, including details like RefId, TestContent, TestLevel, TestType, Domain, TestYear, StagesCount, and a list of DomainBands. The interface also features a vertical scrollbar on the right side of the XML view.

3.10.11 StudentSchoolEnrollment

This object defines information related to a student's enrollment. StudentSchoolEnrollment has typically been for one school year, however from 3.4.8, advice is that instances MAY span multiple school years. Due to this change, SchoolYear will now become optional. EntryDate and ExitDate will define the length of the particular school enrollment.

Note: Due to the change above, the community agreed that general advice should be removed from useage of the object from 3.4.8. The implications of this are;

-  StudentSchoolEnrollment may span one or many years
-  A consumer must look to entry and exit dates as well as TimeFrame to identify a 'Current' student.
-  It will be up to the implementation to provide applications with advice.
-  This does not impact on the data structure of the StudentSchoolEnrollment object itself.

**SIF\_Events are reported for this object.**

## SIF Timetabling and Resource Scheduling

These diagrams represent the objects used in scheduling and timetabling. The objects allow schools to securely provide SIS information to the Timetabling and/or Scheduling product of their choice, and also to allow timetable records (including teaching groups and scheduled activities), to be published to a jurisdictional data hub.

3.11.1 EquipmentInfo

This object represents any resource object that is not already described in SIF AU by an existing object (such as RoomInfo or LearningResource). It is intended for use with ResourceBooking, so it can represent any bookable resource; but it is not limited to that usage. While the obvious type of equipment described for booking purposes are things like computers and projectors, the types of equipment that can be booked depends on the educational organisation, and can easily extend to things like vehicles or animals.

SIF\_Events are reported for this object.

3.11.2 LibraryPatronStatus

This object reports the current library status for the requested student or staff member. The minimum data that the object will return will be the patron's ElectronicId, the total number of materials that are checked out and overdue, and the number and amount of any fines that have been assessed to the patron. When a patron has materials that have been checked out, requested, or are overdue, the object will contain a Transaction element describing the details of the transaction. Likewise, any fines that have an outstanding balance will also have a Transaction element for the fine.

When a checked out item is returned to the library, it will not appear in the object, even if the item was overdue. Fines that have an outstanding balance will be reported, but when the fine is paid, it will not appear in the object.

The Key - RefId is a resource id, the unique for reference of this object is the Patron Type and Patron Identifier.

**SIF\_Events are not reported for this object.**

3.11.5 ScheduledActivity

This object provides a broader range of scheduled activities than just normal teaching classes (as covered by SessionInfo). It allows both cyclical and non-cyclical events to be created and shared, with optional alignment to a cyclical timetable grid (TimeTable, TimeTableCell)

SIF\_Events are reported for this object.

	<b>ScheduledActivity</b>		Low	This object provides a broader range of scheduled activities than just normal teaching classes (as covered by SessionInfo). It allows both cyclical and non-cyclical events to be created and shared, with optional alignment to a cyclical timetable grid (TimeTable, TimeTableCell)	
@ 🔑	<b>RefId</b>	M	Low	The GUID of the Object	RefIdType
	<b>SchoolInfoRefId</b>	M	Low	The ID (GUID) of the school for which this attendance information is being reported.	IdRefType
	<b>TimeTableCellRefId</b>	O	Low	An optional Id (GUID) for the timetable cell that this activity is scheduled in. Instances of cyclical classroom sessions will have this element, but one-off events such as excursions will not use this element.	IdRefType
	<b>DayId</b>	O	Low	Day Id, for recurring cyclical days in a timetable: aligns to TimeTableCell/DayId. If TimeTableChangeReasonList/TimeTableChangeReason is given as Mapping (i.e. the object is being published in order to align a cyclical timetable to a calendar date), then the DayId must be provided, since that is what is being aligned to ActivityDate.	LocalIdType
	<b>PeriodId</b>	O	Low	Period Id within the Day Id, for recurring cyclical days in a timetable: aligns to TimeTableCell/PeriodId.	LocalIdType
	<b>TimeTableRefId</b>	O	Low	The GUID of the TimeTable to which this Cell belongs	IdRefType
	<b>ActivityDate</b>	M	Low	Date for which the activity is scheduled. This element is mandatory even if the object is used for preplanning excursions: a tentative or notional date and time should be provided if a finalised date is not available.	xs:date
	<b>ActivityEndDate</b>	O	Low	Date for which a multi-day activity is scheduled to end.	xs:date
	<b>StartTime</b>	M	Low	Starting time for activity. This element is mandatory even if the object is used for preplanning excursions: a tentative or notional date and time should be provided if a finalised date is not available, or applicable (e.g. 0:00 AM).	xs:time
	<b>FinishTime</b>	M	Low	Finish time for activity. This element is mandatory even if the object is used for preplanning excursions: a tentative or notional date and time should be provided if a finalised date is not available, or applicable (e.g. 0:00 AM).	xs:time
	<b>CellType</b>	O	Low	Type of Lesson/Session eg Teaching, Lunch etc.	xs:normalizedString
	<b>TimeTableSubjectRefId</b>	O	Low	Optional to link the GUID of the Subject, if this is a piece of curriculum being scheduled.	IdRefType
	<b>TeacherList</b>	O	Low	A listing of the teachers assigned to the activity, and the type of supervision they are credited with. If no teachers are listed, the activity is assumed to be unsupervised.	ScheduledTeacherListType
	<b>RoomList</b>	O	Low	List of rooms in which the scheduled activity is held. Used for onsite venues which are represented in the source system as rooms. Can include large venues (ovals, library, etc), if they have been represented as rooms; source system practice varies.	RoomListType
	<b>AddressList</b>	O	Low	The address(es) associated with the scheduled activity.	AddressListType
	<b>Location</b>	O	Low	Text description of venue. Can be used for either onsite or offsite venues. Can be used if neither RoomList nor AddressList is appropriate or supported by the source system. (E.g. the venue is the oval, which is not represented as a room; the venue is a specific part of the park). If RoomList, AddressList, and Location conflict, the order of priority in interpreting the object is RoomList, then AddressList, then Location.	xs:normalizedString
	<b>ActivityType</b>	O	Low	The type of activity undertaken.	AUCodeSetsScheduledActivityTypeType
	<b>ActivityName</b>	O	Low	This element is required if this is a one-off event, i.e. there is no TimeTableCellRefId provided, in order for excursions to be uniquely identified.	xs:normalizedString

Element/@Attribute	Char	Privacy Rating	Description	Type
<b>ActivityComment</b>	O	Low	Allows free-text information, e.g. for excursions. Comment should not be used to identify the location of the venue, since the contents of Comment are open-ended.	xs:normalizedString
<b>StudentList</b>	O	Low	Students who are scheduled to attend the event. Not required for cyclical events, as this would be expected to be provided from TimeTableCell/TeachingGroup instead.	StudentsType
<b>TeachingGroupList</b>	O	Low	Teaching groups which are scheduled to attend the event. Not required for cyclical events, as this would be expected to be provided from TimeTableCell/TeachingGroup instead.	TeachingGroupListType
<b>YearLevels</b>	O	Low	List of year levels offered by the school.	YearLevelType
<b>Override</b>	O	Low	This flag should be used to indicate whether or not this ScheduledActivity overrides a previous ScheduledActivity (as a replacement instance, instead of a PUT update to an existing ScheduledActivity object). In any initial provisioning this element should NOT be provided.	ScheduledActivityOverrideType
<b>OverridePatch</b>	O	Low	If this ScheduledActivity overrides a previous ScheduledActivity, this flag indicates whether the object contents are interpreted as a patch, or an replacement of the previous object's elements. In the former case, any elements not provided in this instance are preserved from the previous instance; in the latter, none of the previous object's elements are preserved. As is standard with patches, if this flag is true, a list needs to be updated in its entirety, and can only be deleted via an empty list instance (e.g. <RoomList/> to delete the list of rooms from the object.)	xs:boolean
<b>TimeTableChangeReasonList</b>	O	Low	Rationale behind the updates provided in this object, if this object instance is used to update a previous ScheduledActivity or TimeTableCell. The reasons given will help the receiving system make sense of the update.	TimeTableChangeReasonListType
<b>LocalCodeList</b>	O	Low		LocalCodeListType
<b>SIF_Metadata</b>	O	Low		SIF_MetadataType
<b>SIF_ExtendedElements</b>	O	Low		SIF_ExtendedElementsType

3.11.6 SchoolCourseInfo

This object is for course information.

All local ids in non-authoritative objects are optional. It is therefore up to the provider and the actual agent's design and choreography to determine whether or not to use or local ids from parent objects. There are cases in some subscribing systems where it might not possible to add RefId columns and therefore the RefId of related objects cannot be stored. For example a target system that listens to TimeTableSubject events and updates them may not be able to store the associated SchoolCourseInfoRefId with that object. The only way it can link the TimeTableSubject object with the appropriate course might be through its local course id. Having local ids that link the parent objects with the child object can simplify the agent design. Generally it is suggested to use the appropriate RefIds whenever possible and only use local ids if there is no other way to use RefIds.

**SIF\_Events** are reported for this object.

### 3.11.9 TeachingGroup

This object identifies a particular Teaching Group or class in a particular a time table.

The proposed object is based on the UK B1: TeachingGroup object. For the Australian object, a subject being taught at any one year level can have more than one teaching group in any one time table. Also a teaching group can be brought together for more than one subject.

All local ids in non-authoritative objects are optional. It is therefore up to the provider and the actual agent's design and choreography to determine whether or not to use or local ids from parent objects. There are cases in some subscribing systems where it might not possible to add Refld columns and therefore the Refld of related objects cannot be stored. For example a target system that listens to TimeTableSubject events and updates them may not be able to store the associated SchoolCourseInfoRefld with that object. The only way it can link the TimeTableSubject object with the appropriate course might be through its local course id. Having local ids that link the parent objects with the child object can simplify the agent design. Generally it is suggested to use the appropriate Reflds whenever possible and only use local ids if there is no other way to use Reflds.

**SIF\_Events are reported for this object.**

3.11.10 TimeTable

The purpose of this object is to define a schedule or Time Table structure/skeleton for the school. The Time Table is produced by the Time Tabling software. Once the Time Table is produced, the time tabling software creates the schedule based on business rules and constraints to fit into the time table structure.

The proposed Time Table object is based on a combination of the proposed UK B6 – Timetable Cycle Object and Timetable Scope Object.

The Time Table is identified uniquely in the SIF Zone by its GUID, School and School Year. A Time Table is linked to a particular school.

All local ids in non-authoritative objects are optional. It is therefore up to the provider and the actual agent's design and choreography to determine whether or not to use or local ids from parent objects. There are cases in some subscribing systems where it might not possible to add RefId columns and therefore the RefId of related objects cannot be stored. For example a target system that listens to TimeTableSubject events and updates them may not be able to store the associated SchoolCourseInfoRefId with that object. The only way it can link the TimeTableSubject object with the appropriate course might be through its local course id. Having local ids that link the parent objects with the child object can simplify the agent design. Generally it is suggested to use the appropriate RefIds whenever possible and only use local ids if there is no other way to use RefIds.

In order to align the timetable day cycle to specific calendar dates, use ScheduledActivity/ActivityDate in conjunction with ScheduledActivity/DayId, referencing the TimeTable involved via ScheduledActivity/TimeTableRefId. ScheduledActivity/TimeTableChangeReasonList/TimeTableChangeReason/TimeTableChangeType = "Mapping" is used to indicate that the ScheduledActivity object communicates such an alignment.

**SIF\_Events are reported for this object.**

<b>TimeTable</b>		Low	<p>The purpose of this object is to define a schedule or Time Table structure/skeleton for the school. The Time Table is produced by the Time Tabling software. Once the Time Table is produced, the time tabling software creates the schedule based on business rules and constraints to fit into the time table structure.</p> <p>The proposed Time Table object is based on a combination of the proposed UK B6 – Timetable Cycle Object and Timetable Scope Object.</p> <p>The Time Table is identified uniquely in the SIF Zone by its GUID, School and School Year. A Time Table is linked to a particular school.</p> <p>All local ids in non-authoritative objects are optional. It is therefore up to the provider and the actual agent's design and choreography to determine whether or not to use or local ids from parent objects. ### 3.11.11 TimeTableCell

The purpose of this object is to identify a specific cell within a particular TimeTable. A time table is a structure that represents all the available days and times (periods) for which a particular teaching group, or subject can be scheduled.

A TimeTableCell is uniquely identified in the SIF space by its GUID.

And the following must be provided at object creation:

-  the timetable it belongs to,
-  the subject that is being scheduled,
-  the teaching group (representing the students, teachers and subject),
-  the room that is allocated,
-  the allocated teacher.

All local ids in non-authoritative objects are optional. It is therefore up to the provider and the actual agent's design and choreography to determine whether or not to use or local ids from parent objects. There are cases in some subscribing systems where it might not possible to add RefId columns and therefore the RefId of related objects cannot be stored. For example a target system that listens to TimeTableSubject events and updates them may not be able to store the associated SchoolCourseInfoRefId with that object. The only way it can link the TimeTableSubject object with the appropriate course might be through its local course id. Having local ids that link the parent objects with the child object can simplify the agent design. Generally it is suggested to use the appropriate RefIds whenever possible and only use local ids if there is no other way to use RefIds.

**SIF\_Events are reported for this object.**

3.11.12 TimeTableContainer

This object has been proposed as part of a solution for issues raised with the transmission of timetable information where the software vendor producing the cyclic timetable is not the source of truth for ongoing publishing. e.g. not the endpoint provider.

This object is labelled as EXPERIMENTAL. That means it is subject to changes which may be breaking based on vendor and jurisdiction implementation, testing and confirmation.

The purpose of this object is to allow a third party software product to submit a cyclic Timetable and all its components as a single payload. The POSTing of this information to an endpoint, allows the endpoint provider to allocate individual resource id's to the components so that the individual entities can be managed by the endpoint provider. e.g. specific TeachingGroupType in this payload will not have a RefId, that will be managed by the endpoint provider if that information is to be re-published separately.

SIF\_Events are reported for this object.

### 3.11.13 TimeTableSubject

This purpose of this object is to define and communicate the subject or distinct piece of curriculum that needs to be scheduled by the time table generator. This is a new object proposed to meet SIF-AU needs. Reviews of the existing specifications identified two relevant objects - SchoolCourseInfo, defined in SIF US 2.2 specification and SchoolGroup, defined within the SIF UK 1.1 specification. These objects appear to have some similar context but seem overly complex considering that Australian requirements, which are limited to the Student Administration System or Curriculum Delivery System providing base information to the Time Tabling application about what curriculum offerings are being proposed. When this data is sent in a Request/Response only those subjects that are relevant to be scheduled (or active), should be sent to the TimeTabling application.

All local ids in non-authoritative objects are optional. It is therefore up to the provider and the actual agent's design and choreography to determine whether or not to use or local ids from parent objects. There are cases in some subscribing systems where it might not possible to add RefId columns and therefore the RefId of related objects cannot be stored. For example a target system that listens to TimeTableSubject events and updates them may not be able to store the associated SchoolCourseInfoRefId with that object. The only way it can link the TimeTableSubject object with the appropriate course might be through its local course id. Having local ids that link the parent objects with the child object can simplify the agent design. Generally it is suggested to use the appropriate RefIds whenever possible and only use local ids if there is no other way to use RefIds.

## 3.12 Wellbeing

These objects represent how schools can securely provide SIS information to the Wellbeing product(s) of their choice, and also how various wellbeing records are to be published to a jurisdictional data hub.

### 3.12.1 PersonalisedPlan

A Personalised Plan will be created as the result of a Core Characteristic, Legal order, Pastoral Care info, ability or Student Behaviour. Will be a document, and the community feel that SIF would most usefully capture metadata around the document. Plans can be specific to a domain, but are still expected to aggregate information gathered about student in disparate locations. This is an extensive area and it SIF needs to provide that information which needs to be transferred between systems or agencies. Broad categories of Learning Plans that have been identified so far are; Medical Plan, Learning Plan, Attendance Plan and Behavioural Plan.

3.12.3 WellbeingAlert

Alert indicating further intervention or knowledge required with regard to a student, which could be Medical, Legal or other. Can reflect both long-term attributes of a student (Characteristics) and short-term attributes (e.g. resulting from Events). They fulfil the need for something that can be sent, associated with the student to transfer information that carries basic, important information. Lightweight, it needs to alert teachers and systems that this student has a 'concern' that needs to be known for 'duty of care'. Currently in the SIF Model there exists the concept of 'medical alerts' and 'alerts', but these are lists of events that are carried with StudentPersonal: if anything is changed then for it to be recognised by consuming systems, they would need to re-consume StudentPersonal and ALL of the lists of alerts. It was noted that this information needs to travel as the result of an event or a concern, not necessarily as a by-product of a change in StudentPersonal.

SIF\_Events are reported for this object.

3.12.6 WellbeingEvent

Event that impacts on a student's duty of care. This has been modelled by Sentral as an Incident, by CEOM as a behaviour support incident and by WA previously as an "Incident Report" but looking to move to terminology such as a "Wellbeing Event". There is an emphasis that this 'event' was needed to track both 'positive' and 'negative' behaviours and it not just the recording of a discipline incident or an accident. This event can be specific to a student, or a group of students, and is not global (e.g. a pandemic). Where an event involves more than one student, they can be listed in the person's involved or if part of a group, can be linked via a WellbeingPersonLink Object, new to the 3.4.5 Data Model. Where the event has an impact on a student's wellbeing an individual record for each student should be generated, or linked via WellbeingPersonLink. E.g. where a student is reporting that another student fell off his bike, then the reporting student is listed as a person involved, or where a student is part of a group, they can be connected via WellbeingPersonLink.

SIF\_Events are reported for this object.

### 3.12.7 WellbeingPersonLink

Object intended to list one or more groups of involved parties to a WellbeingEvent and optionally a WellbeingResponse, when the primary involvement in that event is not restricted to a single student. Groups are identified through the GroupId element, whose value is repeated for a WellbeingPersonLink instance for each member of that group. Participants are not restricted to being students, and can be staff, student contacts, or other third parties.

SIF\_Events are reported for this object.

### 3.12.8 WellbeingResponse

An outcome of a Student Wellbeing Event - or more often referred to in discussions as an 'Incident' usually will have a WellbeingResponse, action or an outcome. Many events may have WellbeingResponses that need to be reported to other systems or agencies. This may be a Suspension, an Expulsion/Exclusion, or an experience which requires reward or recognition. WA has specific language around categories of suspension—e.g. they are legally constrained not to refer to expulsion of students.

SIF\_Events are reported for this object.

## 4 Conceptual Model

### 4.1 Conceptual

#### Conceptual Model

The conceptual model is at the level of entities and relations between them; attributes are not listed. All objects in the Australian data model are represented; some objects are represented as relations between entities, rather than as distinct entities. For clarity, the conceptual model is broken up into use cases:

-  Enrolment
-  Account Provisioning
-  Timetable/Attendance
-  Finance/Resources
-  NAPLAN
-  Wellbeing
-  Classroom Assessment
-  Scheduling
-  Statistics
-  Teaching and Learning
-  Reporting Collections

#### Entity Diagram/Table Conventions

Entities are named with names that the schools sector business can relate to readily, rather than the current names of SIF AU objects.

The conceptual model uses UML conventions. Each class corresponds to one or more SIF objects. Abstract classes, which generalise from classes, are used to capture relations more economically; they are *italicised* in the diagrams.

Relations between classes, which correspond to SIF objects, are italicised in the Entity tables.

Alternatives are indicated with semicolon. Refinements/context on alternatives are indicated by *italics* and prefix. A colon is used to introduce the context in which an alternative representation is applicable.

#### Relation Table Conventions

The comma-delimited objects enumerated are the set of objects which together represent the relationship, including the two objects containing the join attribute and the object joining the two, where applicable.

If an object is optional for the relation to be expressed, it is put in brackets.

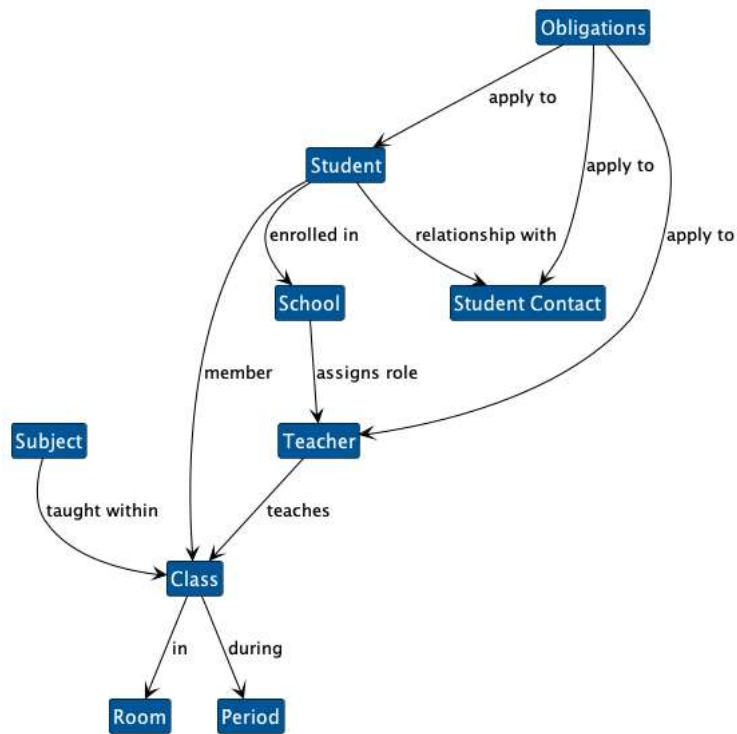

If two objects are alternatives for each other in the relation presented, they are represented by { Object1, Object 2 }. (See Account Provisioning, for instance).

If there are multiple sets of objects which represent the relationship, they are semicolon-delimited: "A, B, C; Y, Z".

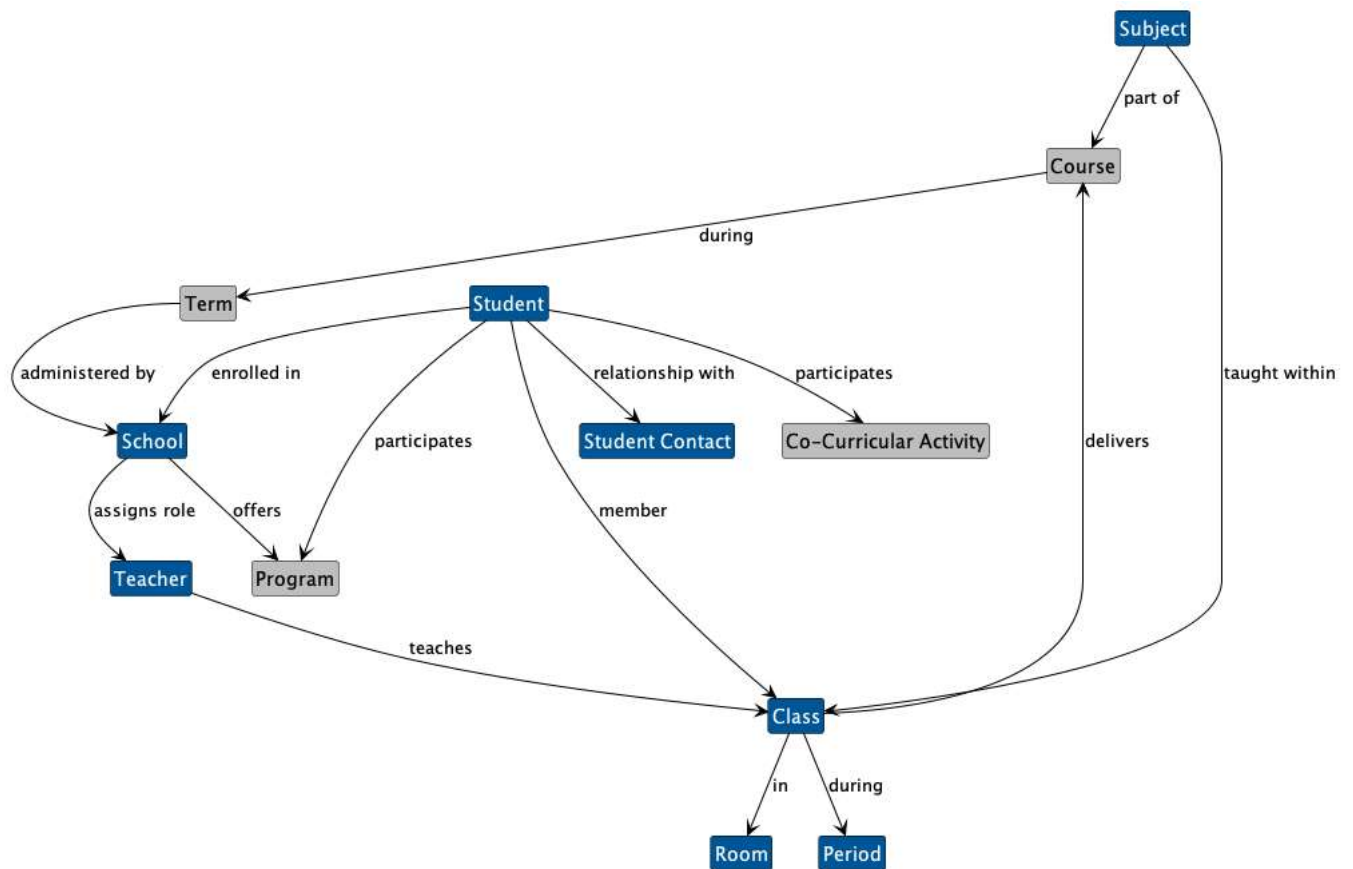

Some objects are highly denormalised, to the extent that they contain data about both entities being related; in such cases, only a single object is needed to represent the relation.

#### Enrolment

The following are the primary objects involved in enrolling a student onto school systems.

The following includes secondary objects which may also be invoked during student enrolment (shaded grey).

## Entities

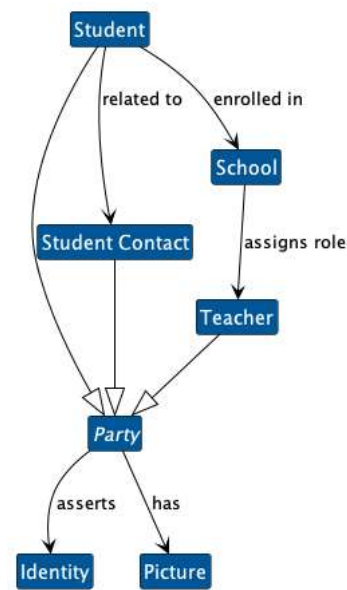

Conceptual Entity	SIF AU Object/s
School	SchoolInfo
Student	StudentPersonal; StudentDataTransferNote
<i>enrolls</i>	StudentSchoolEnrollment; StudentDataTransferNote
Teacher	StaffPersonal
<i>assigns roles</i>	StaffAssignment
Parent/Student Contact	StudentContactPersonal
<i>relationship with</i>	StudentContactRelationship
Class	TeachingGroup; SectionInfo
<i>member</i>	StudentSectionEnrollment
Course	SchoolCourseInfo [ <i>relations coded redundantly with Class</i> ]
Subject	TimeTableSubject
EducationAuthority	LEAInfo
Term	TermInfo
Period	TimeTableCell
Room	RoomInfo
Program	SchoolProgram
<i>participates</i>	<i>Program</i> : StudentParticipation; <i>Co-Curricular Activity</i> : StudentActivityParticipation
Picture	PersonPicture
Co-Curricular Activity	StudentActivityInfo

## Relations

The following maps the relations captured in the conceptual model to sets of SIF AU objects.

Conceptual	SIF AU Object/s
A Student is enrolled in a School	StudentPersonal, StudentSchoolEnrollment, SchoolInfo; StudentDataTransferNote
A Teacher is assigned a role in a School	StaffPersonal, StaffAssignment, SchoolInfo
A Parent/Student Contact has a relationship with a Student	StudentContactPersonal, StudentContactRelationship, StudentPersonal
A Teacher teaches/associates with a Class	StaffPersonal, TeachingGroup
A Class contributes to a Course	TeachingGroup, SchoolCourseInfo; SectionInfo, SchoolCourseInfo
A Subject is taught within a Class	TeachingGroup, TimeTableSubject
(A Class occurs during a Term)	SectionInfo, TermInfo
A Class is taught in a Room	TeachingGroup, RoomInfo
A Class is taught during a Period	TeachingGroup, TimeTableCell
A Course is taught within a School	SchoolCourseInfo, SchoolInfo
A Course is taught during a Term	SchoolCourseInfo, TermInfo
A Subject is part of a Course	TimeTableSubject, SchoolCourseInfo
A Subject is taught within a School	TimeTableSubject, SchoolInfo
A Term is administered by a School	TermInfo, SchoolInfo
A Student participates in a Co-Curricular Activity	StudentPersonal, StudentActivityParticipation, StudentActivityInfo
A School belongs to an Education Authority	SchoolInfo, LEAInfo
A School offers a Program	SchoolInfo, SchoolPrograms
A Student participates in a Program	StudentPersonal, StudentParticipation, SchoolPrograms
A Student participates in a Program	StudentPersonal, StudentParticipation, SchoolPrograms

## Account Provisioning

Entities

Relations which map to SIF objects are given in lowercase and are *italicised*

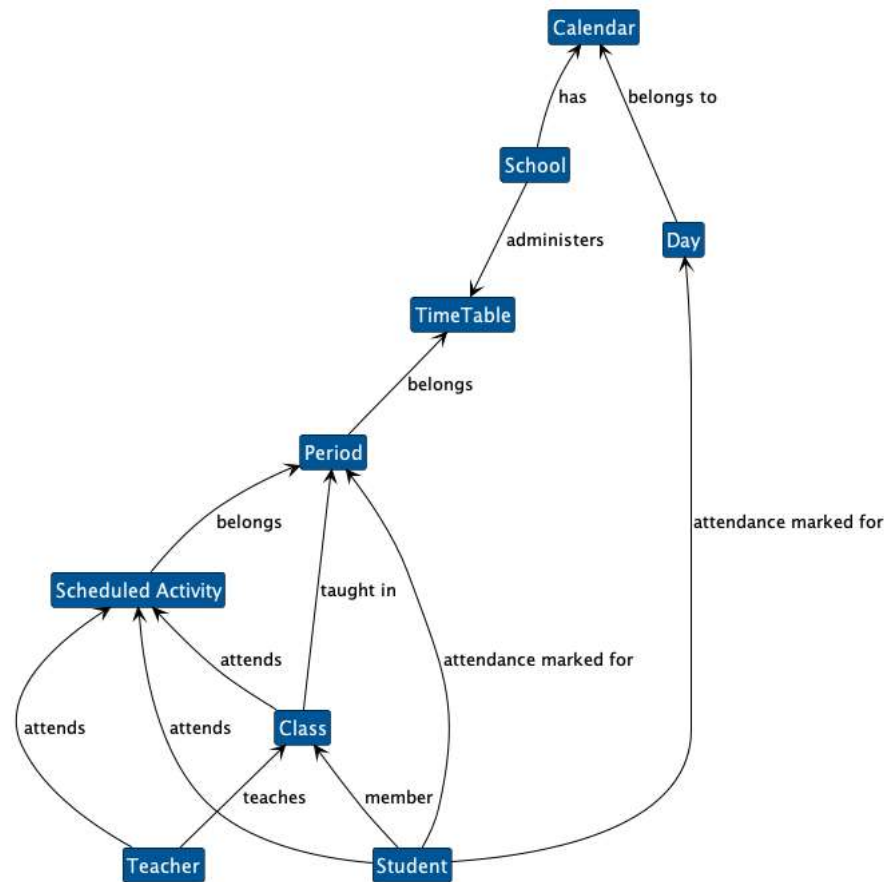

Conceptual Entity	SIF AU Object/s
Identity	Identity
Picture	PersonPicture
Obligations	PersonalPrivacyObligationDocument

Relations

The following maps the relations captured in the conceptual model to sets of SIF AU objects.

Conceptual	SIF AU Object/s
A Student is a Party	StudentPersonal
A Teacher is a Party	StaffPersonal
A Parent/Student Contact is a Party	StudentContactPersonal
A Party has a Picture	{StudentPersonal, StaffPersonal, StudentContactPersonal}, PersonPicture
A Party asserts an Identity	{StudentPersonal, StaffPersonal, StudentContactPersonal}, Identity
Obligations apply to a Party	PersonalPrivacyObligationDocument, {StudentPersonal, StaffPersonal, StudentContactPersonal}

Timetable/Attendance

Entities

Relations which map to SIF objects are given in lowercase and *italicised*

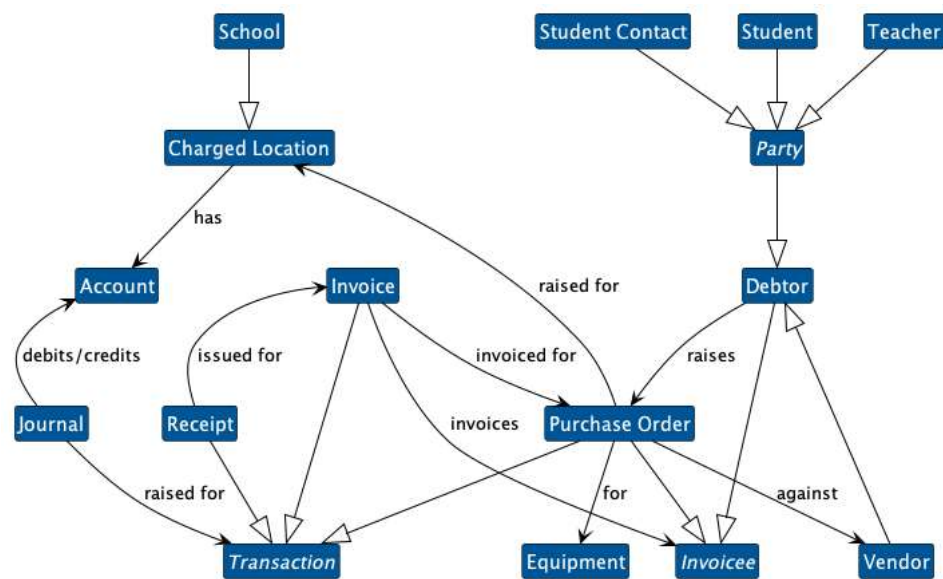

Conceptual Entity	SIF AU Object/s
School	SchoolInfo
Student	StudentPersonal
<i>enrolls</i>	StudentSchoolEnrollment
Teacher	StaffPersonal
<i>assigns role</i>	StaffAssignment
Class	TeachingGroup; SectionInfo; TimeTableContainer
<i>member</i>	StudentSectionEnrollment
Calendar	CalendarSummary
Day	CalendarDate
Period	TimeTableCell; SessionInfo; TimeTableContainer
TimeTable	TimeTable; TimeTableContainer
Scheduled Activity	ScheduledActivity
<i>attendance marked for</i>	<i>Period</i> : StudentPeriodAttendance; <i>Calendar Day</i> : StudentDailyAttendance, StudentAttendanceTimeList; <i>reporting object</i> : StudentAttendanceSummary

Relations

The following maps the relations captured in the conceptual model to sets of SIF AU objects.

Conceptual	SIF AU Object/s
A Student is enrolled in a School	StudentPersonal, StudentSchoolEnrolment, SchoolInfo
A Teacher is assigned a role in a School	StaffPersonal, StaffAssignment, SchoolInfo
A Student is a member of a Class	StudentPersonal, TeachingGroup; StudentPersonal, StudentSectionEnrollment, SectionInfo
A Teacher teaches/associates with a Class	StaffPersonal, TeachingGroup
A Class is taught during a Period	TeachingGroup, TimeTableCell <i>cyclic</i>
A School has a Calendar	SchoolInfo, CalendarSummary
A Day belongs to a Calendar	CalendarDate, CalendarSummary
A Timetable is administered by a School	TimeTable, SchoolInfo
A Period belongs to a Timetable	TimeTableCell, TimeTable
A Scheduled Activity is scheduled for a Period	ScheduledActivity, TimeTableCell, (SessionInfo)
A Student attends a Scheduled Activity	ScheduledActivity, StudentPersonal
A Teacher attends a Scheduled Activity	ScheduledActivity, StaffPersonal
A Class is involved with a Scheduled Activity	ScheduledActivity, TeachingGroup
A Student has attendance marked for a Period	StudentPersonal, StudentPeriodAttendance, ((TimeTableCell, SessionInfo))
A Student has attendance marked for a Day	StudentPersonal, StudentDailyAttendance, (CalendarDate); StudentPersonal, StudentAttendanceTimeList, (CalendarDate)

Finance/Resources

Entities

Relations which map to SIF objects are given in lowercase and *italicised*

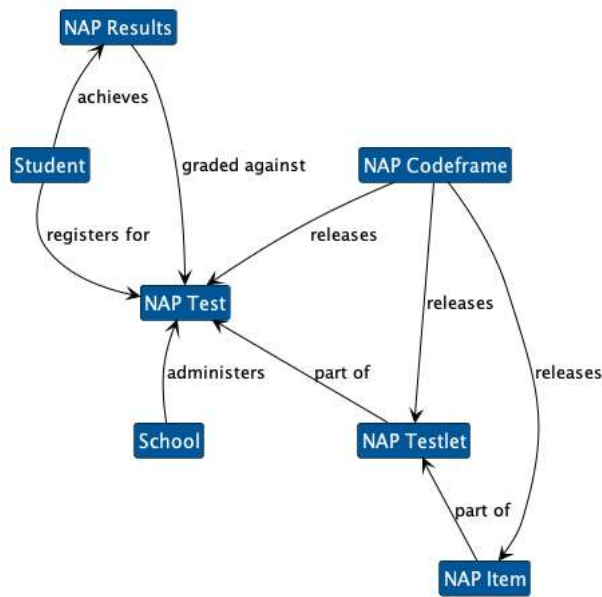

Conceptual Entity	SIF AU Object/s
School	SchoolInfo
Teacher	StaffPersonal
Parent/StudentContact	StudentContactPersonal
Equipment	EquipmentInfo
Vendor	VendorInfo
Purchase Order	PurchaseOrder
Charged Location	ChargedLocation
Debtor	Debtor
Account	FinancialAccount
Journal	Journal
Invoice	Invoice
Receipt	PaymentReceipt

Relations

The following maps the relations captured in the conceptual model to sets of SIF AU objects.

Conceptual	SIF AU Object/s
A Teacher (Staff) raises a Purchase Order	StaffPersonal, PurchaseOrder
A Purchase Order is raised against a Vendor	PurchaseOrder, VendorInfo
A Purchase Order is raised for a Charged Location	PurchaseOrder, ChargedLocationInfo
A School is a Charged Location	SchoolInfo, ChargedLocationInfo
A Party is a Debtor	{StudentPersonal, StaffPersonal, StudentContactPersonal}, Debtor
A Vendor is a Debtor	VendorInfo, Debtor
A Charged Location has an Account	ChargedLocationInfo, FinancialAccount
An Invoice is a Transaction	Invoice
A Receipt is a Transaction	PaymentReceipt
A Purchase Order is a Transaction	PurchaseOrder
A Journal processes a Transaction	Journal, {Invoice, PaymentReceipt, PurchaseOrder}
A Journal debits/credits an Account	Journal, FinancialAccount
A Debtor is an Invoicee	Debtor
A Purchase Order is an Invoicee	PurchaseOrder
An Invoice invoices an Invoicee	Invoice, {Debtor, PurchaseOrder}
An Invoice is invoiced against an Account	Invoice, FinancialAccount
An Invoice is invoiced for a Purchase Order	Invoice, PurchaseOrder
A Receipt is issued for an Invoice	Invoice, PaymentReceipt
A Purchase Order is for Equipment	PurchaseOrder, EquipmentInfo

NAPLAN

Entities

Relations which map to SIF objects are given in lowercase and *italicised*

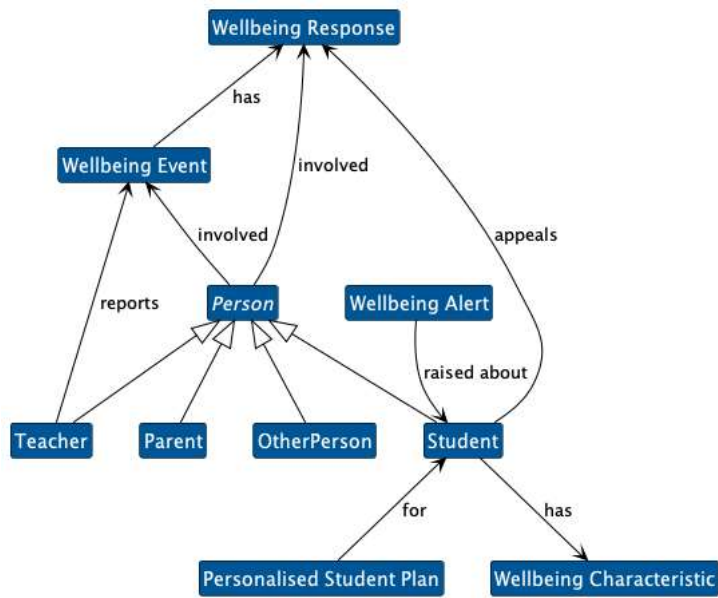

Conceptual Entity	SIF AU Object/s
School	SchoolInfo
Student	StudentPersonal
NAP Test	NAPTest
<i>registers for</i>	<i>NAPEventStudentLink</i>
NAP Testlet	NAPTestlet
NAP Item	NAPTestItem
NAP Results	NAPStudentResponseSet; StudentDataTransferNote; <i>reporting object: NAPTestScoreSummary</i>
NAP Codeframe	NAPCodeFrame

Relations

The following maps the relations captured in the conceptual model to sets of SIF AU objects.

Conceptual	SIF AU Object/s
A Student registers for a NAP Test	StudentPersonal, NAPStudentEventLink, NAPTest
A School administers a NAP Test	StudentPersonal, (SchoolInfo), NAPStudentEventLink, NAPTest
A NAP Testlet is part of a NAP Test	NAPTestlet, NAPTest
A NAP Item is part of a NAP Testlet	NAPTestItem, NAPTestlet
A NAP Codeframe releases NAP Tests	NAPCodeFrame, NAPTest
A NAP Codeframe releases NAP Testlets	NAPCodeFrame, NAPTestlet
A NAP Codeframe releases NAP Test items	NAPCodeFrame, NAPTestItem
A Student achieves a NAP Result	StudentPersonal, NAPStudentResponseSet; StudentDataTransferNote; <i>aggregated</i> : NAPTestScoreSummary
NAP Results are graded against a NAP Test	NAPStudentResponseSet, NAPTest; <i>aggregated</i> : NAPTestScoreSummary, NAPTest

Wellbeing

Entities

The entities in the Wellbeing Usecase are densely interrelated; a Personalised Plan, for example, can draw on all of Behaviour Events, Alerts, and Wellbeing Characteristics. The relations indicated here are not an exhaustive list, and some relations have been left out for clarity. Relations which map to SIF objects are given in lowercase and *italicised*

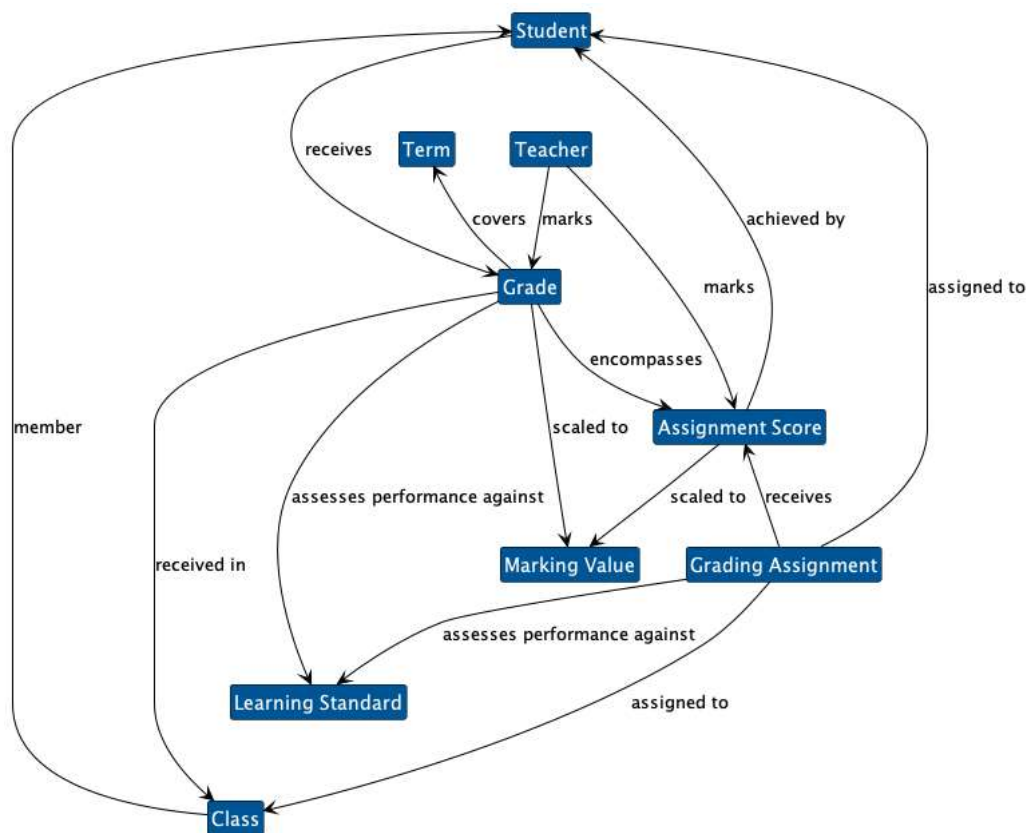

Conceptual Entity	SIF AU Object/s
School	SchoolInfo
Student	StudentPersonal; StudentDataTransferNote
Teacher	StaffPersonal
Parent	StudentContactPersonal
Other Person	WellbeingPersonLink
Wellbeing Event	WellbeingEvent
Wellbeing Response	WellbeingResponse
<i>involved</i>	<i>WellbeingPersonLink</i>
<i>appeals</i>	<i>WellbeingAppeal</i>
Wellbeing Alert	WellbeingAlert
Wellbeing Characteristic	WellbeingCharacteristic
Personalised Student Plan	PersonalisedPlan

Relations

The following maps the relations captured in the conceptual model to sets of SIF AU objects.

Conceptual	SIF AU Object/s
A Student is involved in a Wellbeing Event	StudentPersonal, WellbeingEvent, <i>group:WellbeingPersonLink</i>
A Teacher can be involved in a Wellbeing Event	StaffPersonal, WellbeingEvent, <i>group:WellbeingPersonLink</i>
A Student Contact can be involved in a Wellbeing Event	StudentContactPersonal, WellbeingPersonLink
An Other Person can be involved in a Wellbeing Event	WellbeingPersonLink
A Teacher (Staff) reports a Wellbeing Event	StaffPersonal, WellbeingPersonLink
A Wellbeing Event has a Wellbeing Response	WellbeingEvent, WellbeingResponse
A Student is involved in a Wellbeing Response	StudentPersonal, WellbeingResponse
A Teacher can be involved in a Wellbeing Response	StaffPersonal, WellbeingResponse, <i>group:WellbeingPersonLink</i>
A Student Contact can be involved in a Wellbeing Response	StudentContactPersonal, WellbeingPersonLink
An Other Person can be involved in a Wellbeing Response	WellbeingPersonLink
A Wellbeing Response is appealed by a Student	WellbeingResponse, WellbeingAppeal, StudentPersonal
A Wellbeing Alert is raised about a Student	WellbeingAlert, StudentPersonal
A Student has a Wellbeing Characteristic	StudentPersonal, WellbeingCharacteristic
An Individualised Plan is for a Student	SPersonalisedPlan, StudentPersonal
An Individualised Plan responds to a Wellbeing Characteristic	WellbeingChracteristic, PersonalisedPlan
An Individualised Plan responds to a Behaviour Event	WellbeingEvent, PersonalisedPlan

## Classroom Assessment

## Entities

Relations which map to SIF objects are given in lowercase and *italicised*

Grading Assignment	GradingAssignment
Assignment Score	GradingAssignmentScore
Marking Value	MarkValueInfo
Grade	StudentGrade; StudentDataTransferNote; <i>reporting object: StudentScoreJudgementAgainstStandard</i>

## Relations

The following maps the relations captured in the conceptual model to sets of SIF AU objects.

Conceptual	SIF AU Object/s
A Student is a member of a Class	StudentPersonal, TeachingGroup; StudentPersonal, StudentSectionEnrollment, SectionInfo
A Grading Assignment is assigned to a Class	GradingAssignment, TeachingGroup
A Grading Assignment is assigned to a Student	GradingAssignment, StudentPersonal
A Grading Assignment receives an Assignment Score	GradingAssignmentScore, GradingAssignment
An Assignment Score is achieved by a Student	GradingAssignmentScore, StudentPersonal
An Assignment Score is scaled to a Marking Value	GradingAssignmentScore, MarkValueInfo
A Teacher marks an Assignment Score	GradingAssignmentScore, StaffPersonal
A Grading Assignment assesses performance against a Learning Standard	GradingAssignment, LearningStandardItem
A Student receives a Grade in a Class	{StudentGrade, StudentScoreJudgementAgainstStandard}, StudentPersonal, TeachingGroup; StudentDataTransferNote
A Teacher marks a Grade	{StudentGrade, StudentScoreJudgementAgainstStandard}, StaffPersonal
A Grade covers a Term	{StudentGrade, StudentScoreJudgementAgainstStandard}, TermInfo

Conceptual	SIF AU Object/s
A Room is a Resource	RoomInfo
A piece of Equipment is a Resource	EquipmentInfo
A Learning Resource is a Resource	LearningResource
A Library Item is a Resource	Library
A Resource may be booked for a Period	{RoomInfo, EquipmentInfo, LearningResource}, ResourceBooking
A Resource may be booked for a Scheduled Activity	{RoomInfo, EquipmentInfo, LearningResource}, ResourceBooking, ScheduledActivity
A Resource is booked by a Teacher	{RoomInfo, EquipmentInfo, LearningResource}, ResourceBooking, StaffPersonal
A Library Item is checked out by a Party	{StaffPersonal, StudentPersonal, StudentContactPersonal}, LibraryPatronStatus

## Statistics

Entities

The greyed out objects are of secondary importance to the specification, and have been little used to date.

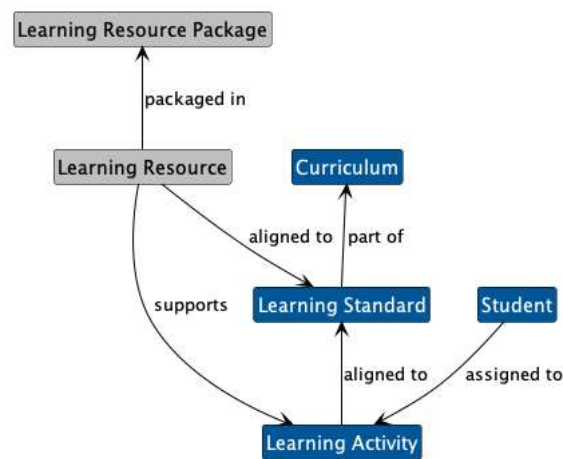

Conceptual Entity	SIF AU Object/s
Statistical Measurement	AggregateStatisticInfo
Statistical Value	AggregateStatisticFact
Statistical Characteristic	AggregateCharacteristic

Relations

<b>IndigenousStatus</b>	O	Whether or not the person identifies themselves as being of Aboriginal and/or Torres Strait Islander descent.	AUCodeSetsIndigenousStatusType
<b>Gender</b>	O	Gender identity as reported by the person: male, female, intersex, or self-defined (e.g. non-binary). (From SIF-AU v1.0 in 2009 up to SIF-AU 3.5.0 in December 2022, this value was expressed through the element <i>Sex</i> . Renaming the element as of SIF-AU 3.6.0 brings SIF-AU in line with naming practice throughout the country.)	AUCodeSetsSexCodeType
<b>Sex</b>	O	The biological sex of the person. (From SIF-AU v1.0 in 2009 up to SIF-AU 3.5.0 in December 2022, this element has been understood to refer to gender identity, "as reported by the person", rather than biological sex. As of SIF-AU 3.6.0, that value is expressed as <i>Gender</i> instead. We do not anticipate that capturing biological sex as opposed to gender identity will be a frequent requirement for school children, so that in effect <i>Gender</i> takes over from <i>Sex</i> .) Example A.285-1: SIF\_ExtendedElements Example

A.286 SIF\_MetadataType

Metadata is commonly referred to as data about data and includes information such as author, grade level, or keywords relating to a learning object, as examples. Metadata can be used to structure and contain any of this kind of information in a consistent manner. In the context of SIF, SIF\_Metadata provides a consistent structure to appropriate SIF objects for the purpose of cataloguing and object discovery, as well as other metadata functions and purposes. One recurring use case within the SIF data model is the requirement for some form of temporal constraints and tagging on objects (see TimeElement). Other metadata elements are based on needs brought to the Data Model Task Force.

IMPORTANT NOTE ON PERSISTENCE

This data is not designed to be permanent. It is designed to frame an object instance and could dissolve as soon as it leaves the SIF framework for the application space. A data warehouse could be used to store metadata for later tracking.

IMPORTANT NOTE ON USAGE

Any usage of metadata is optional unless made a requirement within individual SIF objects, or if a SIF or local profile or zone installation mandates it. SIF\_Metadata allows for the usage of metadata in agents and applications that choose to support it.

This element is designed to operate much like SIF\_ExtendedElements. It is an approved common element that is part of any data object.

Element/@Attribute	Char	Description	Type
StandardHierarchyLevelType		Description of hierarchical level within standards tree.	
Number	M	Integer assigned to each hierarchical level within standards tree. The top level is "1".	xs:unsignedInt
Description	M	Used to describe what role this item is serving in the structure. Some documents describe their levels in terms of standard, strands, and topics. Others use standards, benchmarks, and indicators. In Australia, this is typically in terms of Course or Unit, Year Level, Outcomes. This attribute names the level of the item.	xs:string

A.302 StandardIdentifierType

This element describes the unique identifier for each LearningStandard.

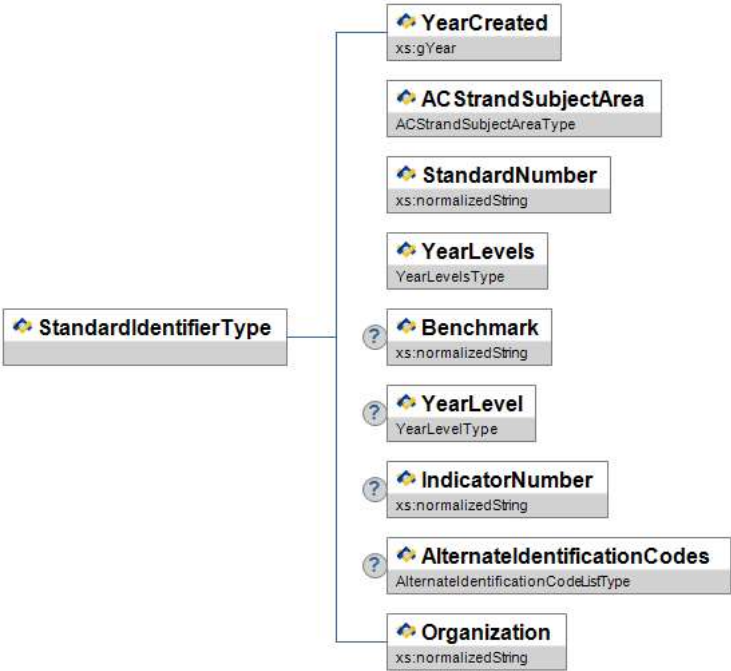

Figure A.302-1: StandardIdentifierType

Element/@Attribute	Char	Description	Type
StandardIdentifierType	O	This element describes the unique identifier for each LearningStandard.	
YearCreated	M	This represents the year that this specific learning standard was created. This is important to indicate as standards are updated to reflect the appropriate year it was created. This would be assigned by and unique to the standard setting body.	xs:gYear
ACStrandSubjectArea	M	This represents the subject or content area this curriculum item addresses. This would be assigned by and unique to the curriculum setting body.	ACStrandSubjectAreaType
StandardNumber	M	This is the specific number of the standard. For example, if the subject is mathematics and this standard is Patterns, Functions and Algebra, this would be StandardNumber 1. This would be assigned by and unique to the standard setting body.	xs:normalizedString
YearLevels	M	This represents the grade level(s) this specific learning standard will address. This may be addressed in different ways. Some states have a grade level that covers several grades and others have just one grade. This would be assigned by and unique to the standard setting body.	YearLevelsType
Benchmark	O	This is the next level within the hierarchy of the learning standard. For example, if the subject is mathematics and the standard is algebra, this would be the next delineation - Represent an unknown quantity as a variable using a symbol, including letters. This would be assigned by and unique to the standard setting body.	xs:normalizedString
YearLevel	O	This is the specific year level. This is to be utilized if the YearLevel covers several years. This would be assigned by and unique to the standard setting body.	YearLevelType
IndicatorNumber	O	This would be the most granular level of the learning standard associated with the grade level. Following the same example, an indicator for Algebra YearLevel 5-7, the indicator for the benchmark above at Year 6 would be to Evaluate simple expressions by replacing variables with given values, and use formulas in problem-solving situations. This would be assigned by and unique to the standard setting body.	xs:normalizedString
AlternateIdentificationCodes	O	This element is for an organization to utilize for an internal code. This may be used for an alignment schema or other purposes that are only internal for the organization.	AlternateIdentificationCodeListType
Organization	M	Name of organization represented by the document, i.e., "National Council of Teachers of Mathematics (NCTM)," "NSW," "ACARA." This is the name of the organization that has this AlternateIdentificationCode. This should be a text field.	xs:normalizedString

### English Proficiency

1289.0 - Standards for Statistics on Cultural and Language Diversity, 1999, <https://www.abs.gov.au/Ausstats/abs@.nsf/mf/1289.0>

Explanation of usage: [https://www.ausstats.abs.gov.au/ausstats/subscriber.nsf/0/CA25687100069892CA256889000C9E88/\\$File/12890\\_1999.pdf](https://www.ausstats.abs.gov.au/ausstats/subscriber.nsf/0/CA25687100069892CA256889000C9E88/$File/12890_1999.pdf)

Classification: The standard classification used to code, store and disseminate data collected by Proficiency in Spoken English is a flat classification, having only one level with four categories. These categories are the same as the question response categories ('Very well', 'Well', 'Not well', 'Not at all'). Two supplementary codes are also provided in the classification for 'Not stated' and 'Not applicable' responses (see Coding Procedures), which makes the classification applicable to all persons. However, it should be noted that this is a coding convention and that, setting aside these special codes, the scope of the classification, along with the variable, is people who speak a language other than English.

### Time Table Change Type

Rationale for updating a timetable (e.g. via ScheduledActivity)

Cancellation	Activity is cancelled, and not merely updated
Event	Cyclical activity is overridden with a one-off event, such as an excursion, incursion, exam, assembly, sport day or camp
Mapping	Update defines a mapping between a timetable cyclical day and a calendar date
RoomRemoval	Remove room from timetabled activity, update may also specify replacement room(s)
StudentChange	Change the list of students included in the activity
TeacherAbsence	Teacher is absent, update may also specify replacement teacher(s)

### Travel Mode

Travel Mode - Introduced by CEM to indicate mode of travel of the student to/from school. Initial release in 3.4.8

A	Walks between home or a carers' residence and school
B	Rides a bicycle or scooter between home or carer's place and school
C	Driven by car/motor vehicle between home or a carers' residence and school
D	Bus to/from school gates (mostly by bus, remainder on foot)
E	Tram to/from near school (mostly by tram, remainder on foot)
F	Train to/from near the school (mostly by train, remainder on foot)
G	Combination of car and public transport
H	Combinations of public transport such as train and bus, or train and tram
I	Taxi or other modes

Appendix C: External Code Sets

All code sets defined by external bodies and referenced within SIF are included here for reference. The left column in each table contains the individual code values that are used in SIF elements and attributes that reference these code sets. These sets of code values are closed and normative for a given version of this specification. Including codes not provided here in corresponding SIF elements and attributes can lead to XML validation errors in installations where the zone integration server or any agent is validating XML messages; the SIF data model allows for locally-defined codes, where deemed appropriate, in the [OtherCodeList](#) element. The right column of each table may provide a textual equivalent or description of the corresponding code, and is provided for informational purposes only. The referenced sources for these code sets serve as the authorities for all descriptions and semantics, and for the definition and maintenance of the code set values themselves. In each release of this specification the SIF Association endeavors to synchronize referenced code sets with updates from external sources.
